## Metsä Group Green Finance Framework

EUR 100 million Green loan 2021 – 2026 Allocation and impact report 4 October, 2024

### **Green Bank Loan EUR 100 mln**

## Financed assets under the Loan consist of three target areas: Sustainable Water Management, Pollution Prevention and Control, and Renewable Energy

#### **ELIGIBLE ASSETS AND PROJECTS**

| Green Bond<br>Principles<br>Categories | Metsä Group<br>description of projects   | Linkage<br>to the<br>UN SDGs   |
|--|--|--|
| Renewable<br>Energy                    | Renewable energy means energy produced of the biomass generated from harvesting residues, or resource-efficient energy production from side streams of the bioproduct and pulp mills, sawmills and other mechanical wood engineering operations, board mills or tissue paper mills.  Examples of eligible uses are projects that  increase the production or share of renewable energy instead of fossil-based energy  renew the equipment or process for renewable energy production at mills   | 7 commer<br>Signature<br>9 commerce<br>Signature<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Commerce<br>Co |
| Energy<br>Efficiency                   | Energy efficiency projects develop production technology and processes to reduce the consumption of energy in relation to production.  Examples of eligible uses are projects that  develop production processes to reduce energy consumption  replace equipment with more energy efficient solutions. Typically, the improvement in these projects is over 25 %  renew the production line entirely or partially to improve specific energy consumption per production develop the energy recovery of processes  develop closed loop processes (e.g. water systems)  are "Green field investments" for the production unit utilising best available technology (BAT) compared to the earlier practices. | 1 ::::::::::::::::::::::::::::::::::::   |
| Pollution<br>Prevention<br>and Control | ention all resources.  |  |

4.10.2024

| Environmentally<br>sustainable<br>management of<br>living natural<br>resources and<br>land use | Projects that develop sustainable forest management practices, such as harvesting, regeneration and transportation of wood from sustainably managed forests.  Examples of eligible uses are projects that  improve sustainable forest management practices and safeguard biodiversity based on international sustainable forest management schemes, such as PEFC and/or FSC  increase the amount of carbon stored in forests | 13 mm   |
|--|--|---|
| Sustainable Water<br>(and waste water)<br>Management   | Projects that improve sustainable use of water. Water is globally a key resource. Even though Metsä Group operates in areas with abundant surface water resources, we aim to reduce water use even further.  Examples of eligible uses are projects that  reduce the intake of water and the use of process water  improve the recycling and reuse of process water  use cooling water to heat raw waters                    | 6 sanson  |
| Circular Economy<br>Adapted Products,<br>Production<br>Technologies and<br>Processes           | Projects that explore new sustainable, wood-based alternatives to be commercialised and to broaden the product portfolio of forest industry.  Examples of eligible uses are projects that  take ideas from the R&D to production and full commercialisation  enable more sustainable and more resource-efficient production.  improve material efficiency  | 9 manufacture  12 manufacture  13 manufacture  13 manufacture  14 manufacture  15 manufacture  15 manufacture  16 manufacture  17 manufacture  18 manufacture |

### Kemi Bioproduct Mill, Allocation & Impact report of five industrial facilities financed by the Green Loan of 100 MEUR

- This report is published on 4th October, 2024
- Our target is to publish this Allocation & Impact report during the H1 of a financial year. However now in 2024, due to the explosion at the Kemi site evaporation facility in March 2024, any earlier reporting has not been possible
- The Green Loan, on the back of Kemi BTT green/sustainable facilities matures on 11th February, 2026. Funds have been allocated in full.
- Metsä Group sustainability issues can be followed also through our CSRD -reporting

# Action Plan from November 2020; Green Bank Loan target assets and cost estimate

| Assets for Green Bank Loan      | Category under<br>Metsä Group Sustainable Finance<br>Framework                                | Estimated total investment |
|---------------------------------|---|----------------------------|
| Effluent Treatment Plant        | Sustainable Water (and waste water) Management  | EUR 39.7m                  |
| Sulphuric Acid Plant            | Pollution Prevention and Control, and/or<br>Sustainable Water (and waste water)<br>Management | EUR 15.6m                  |
| Cooling towers                  | Sustainable Water (and waste water) Management  | EUR 18.1m                  |
| Total water preservation        |   | EUR 73.4m                  |
| Bark drying and gasification    | Renewable Energy  | EUR 26.2m                  |
| Sludge handling and pelletizing | Pollution Prevention and Control, and/ <u>or</u><br>Renewable Energy                          | EUR 16.1m                  |
| Total renewable energy          |   | EUR 42.3m                  |
| Total                           |   | EUR 115.7m                 |

## Part 1: Sustainable water (and waste water) management

### Financed assets:

- Effluent treatment plant
- Cooling towers

# Cathegory in Green Finance Framework: Sustainable water and waste water management Two facilities financed at Kemi Bioproduct plant: Effluent Treatment Plant and Cooling Towers (1)

### Effluent treatment plant

Estimated cost 39,7 M€. Realized cost: 63,7 M€

Purpose: to reduce waste water load to the sea

Analysis below:

4.10.2024

| Impact target, to achieve a value below the permit limits | Impact target, value             | Realized target 2024                               | Analysis: |
|---|----------------------------------|--|-----------|
| COD, chemical oxygen demand                               | < 30 000 kg/day -> 25 000 kg/day | July 2024: 931 kg/day<br>August 2024: 7532 kg/day  | Achieved  |
| P, phosporous   | < 30 kg/day -> 20 kg/day         | July 2024: 8,03 kg/day<br>August 2024: 5,69 kg/day | Achieved  |
| N, nitrogen   | < 700 kg/day -> >600<br>kg/day   | July 2024: 170 kg/day<br>August 2024: 191 kg/day   | Achieved  |
| TSS, total suspended solids                               | 3000 kg/day                      | July 2024: 2565 kg/day<br>August 2024: 2438 kg/day | Achieved  |

Metsä Group Treasury /APL

## Cathegory in Green Finance Framework: Sustainable water and waste water management Two facilities financed at Kemi Bioproduct plant: Effluent Treatment Plant and Cooling Towers (2)

### Cooling towers

- Estimated cost 18,1 M€. Realized cost: 25,9 M€
- Purpose: to reduce water heat load to sea
- Impact target: 470 MW -> 20 MW. Total load heat load remains below the current level (130 MW)
- Realized impact: Achieved. Total heat load to the sea varies btw 5,5 10,1 Tj/month while permit limit is 4400 Tj/annum.

4.10.2024

## Part 2: Renewable Energy & Pollution Prevention and Control

#### Financed assets:

- Bark drying and gasification
- Sludge handling and pelletizing
- Sulphuric acid plant

### Cathegory in Green Finance Framework: Renewable energy & Pollution prevention and control Three facilities financed at Kemi Bioproduct Plant as below:

- Bark drying and gasification. Estimated cost 23,5 M€. Realized cost: 26,2 M€
  - Purpose: Reduce Co2 emissions from fossil fuels
  - Impact target: fossil Co2/year emissions after investment to be zero tonnes Co2/year
  - Realized impact: Achieved. The Mill does not use fossil fuels.
- Sludge handling and pelletizing. Estimated cost 16,1 M€. Realized cost: 33,8 M€
  - Purpose: to reduce suspended solids to the sea and produce biopellets from the sludge
  - Impact: Suspended solids to the sea current 3000 kg/day. Suspended solids to the sea will not grow despite of the larger mill production volumes.
  - Realized impact: Achieved with some variance. The process is under constant development. Suspended solids amounts have stayed below 3000 kg/day. Examples: July 2024 2565 kg/day and August 2024 2438 kg/day.
- Sulphuric acid plant ("SAP"). Estimated cost 15,6 M€. Realized cost: 16,4 M€
  - Purpose: to reduce sulphate load to the sea

4.10.2024

- Impact: Reduces the use of purchased sulfuric acid 18 000 t/a (- 33 %) and sulfate emission 17 000 t/a
- Realized impact: Process works, although the acid strength is under development. There have been some problems and damages in the technical application during 2024.
